RL-TC Taper Capable

For Tapered or Straight Cylindrical Containers

Capabilities

One of our most popular machines is the RL-TC, the Race Label Taper Capable. The RLTC was specifically designed to label tapered bottles and containers, such as Bordeaux, Burgundy and Champagne-style bottles. Tapered bottles - whether a slight or radical taper - can be difficult to label, but we have designed a specialized label application machine that will apply your labels effortlessly.

The RL-TC not only handles tapered bottle applications, but will also label straight cylindrical bottles and containers. Also available in WIDE FORMAT, the RLTC-W is used for taller tapered bottles and labels for web width up to 12.5"

The *Lip Balm* and *Small Vial* attachment option is available for small vials, tubes, tins and lip balms ranging from 0.5" up to 1.5" diameter.
